	Urgent	Not Urgent
Important	Do (MVP) ● In the console menu pick an artist and type what you are looking for in the lyrics. ● Get the top songs from that artist from the Genius API sorted by popularity ● Get each song's lyrics from its Genius song page ● Send each song's lyrics + the search to an AI API, which answers yes or no and gives the matching line ● Print matching songs from most to least popular with the matching line. ● Skip songs with no lyrics and show progress while running.	Schedule (V2.0+) ● Do an all artist search instead of one artist at a time. ● Save results to a JSON file so that repeat searches are instant. ● A backup lyrics source in case the Genius page fails.
Not Important	Delegate (Use a library) ● Gson to read JSON from the APIs ● Jsoup to pull the lyrics from the Genius HTML pages ● An AI API to understand the lyrics ● HttpClient to send web requests.	Delete (Cut it) ● A full website ● Playing songs with the mentions ● User accounts
